

How to Add a file/commit to our github repository

We are using the github repository to store and keep track of our progress on the project. For this project you will only need to know how to add files to the repository and commit (confirm) your change to the repository.

In order to add a file :

Drag the file you want to upload into the box and add a commit message below. Commit messages are important because they help us track the changes to the repository. Just write what the file is used for in a brief message and click commit changes:

Commit changes

Add a clear commit message

to describe what you are uploading

☒ Commit directly to the `main` branch.

☐ Create a new branch for this commit and start a pull request. [Learn more about pull requests.](#)

```
1 # YWCC-307-Group-4
2 # Members:
3 William Kaminski
4 Fenil Rana
5 Robert Hall
6 Esteban Martinez Mesa
```

Here I edited the readme.md file while it was already inside of the repository. Readme files are just used to describe the contents of the repository. I added all of our names to the readme as an example

Now I will commit the change with a brief message

This is all you need to know about github for this project
